AI Tool(s) Used

OpenAI ChatGPT / Codex was used as an implementation and debugging assistant.

Scope of Usage

Main assisted files:

- `assets/Scripts/WebMarioGame.js` , lines 12-1047: Cocos Creator 2.4.8 game logic, resource loading, state flow, physics-style collision, asset-based map design, scenery layering, visible power-up items, animation, UI, and audio.
- `assets/menu.fire` : default Cocos Creator scene containing Canvas, Main Camera, and the Game node.
- `README.md` : scoring checklist, run instructions, asset list, and submission notes.

Representative prompts included: "詳細參考pdf要求完成作業", "要用2.4.8版本", "盡量全部用他給的素材", and "詳細閱讀滿足作業要求".

Refinement & Explanation

The code was revised into a Cocos Creator 2.4.8 2D project using global `cc` APIs and a `cc.Class` component. The final implementation includes menu flow, level select, two maps, gravity, collision, camera following, static walls, question blocks, visible mushroom power-ups, player damage, respawn, stomp-only enemy defeat, HUD, timer, atlas-based player/enemy animation, and one-shot sound effects layered over BGM.

The visual implementation was refined to use the provided assignment assets where possible: menu background/title/buttons, HUD icons, Mario and Goomba atlases, flag image, tile sprites, pipe/platform/wall tiles, decorative hills/bushes/clouds, and assignment audio files.
